

Fluorescent Bio Inks

Offset inks with Fluorescent effect

Fluorescent Bio inks have the same properties as normal sheetfed offset inks with additional glowing properties. Under normal daylight, the printing products have a glowing effect.

The **Fluorescent Bio** properties are:

- Fluorescent Bio inks transform UV light in visible light, thus obtaining their luminescence
- Fluorescent inks are not self-illuminating, they are not radioactive, not do they contain phosphorescent materials, they do not glow in the dark, but only in daylight.
- The Fluorescent Bio range includes 7 primary colours and 7 secondary colours, which correspond to the PANTONE® colour book. The secondary colours can be mixed from primary colours but can also be obtained ready-to-print.
- Fluorescent Bio inks are based on Bio-binders and offer high brilliance and very good printability as well as excellent colour intensity and luminescence.
